

Hyperbaric Oxygen Therapy Moncton

Hyperbaric Oxygen Therapy Moncton - Therapy referred to as oxidative therapy is carried out by introducing extra energy in the body. The three ways that this can be performed is to introduce oxygen within the body under pressure making use of Hyperbaric Oxygen, by mixing blood with ozone gas, or by infusing H₂O₂ or Hydrogen Peroxide in a vein. It just takes a small amount of Hydrogen Peroxide to produce a large amount of oxygen, hence, parts on the body which suffer from poor circulation can benefit greatly from the oxygen supply.

Oxidative therapy has been utilized ever since the 1920's, when Dr. T.H. Oliver first made use of Intravenous Hydrogen Peroxide during an epidemic of influenza. This successful treatment helped many individuals and results were reported in the Lancet, a British medical journal. Several years after, a paper was published by Dr. Charles Farr entitled "Therapeutic Use of Intravenous Hydrogen Peroxide." This paper has become the protocol for doctors who administer H₂O₂.

The theories around this therapy vary in its explanation of the way this particular treatment works. Some scientists and researchers have discovered that the presence of H₂O₂ in the body is much more complex than originally thought. The benefits of Oxidative Therapy have been show effective for the following health sicknesses: Cardiovascular Disease, Cerebrovascular Disease, Cardiac arrhythmia, Coronary spasm, Peripheral Vascular Disease, Asthma, COPD, Pulmonary Diseases, Raynaud's Phenomenon, Influenza, Bronchiectasis, Chronic Bronchitis, Herpes Simplex Virus, HIV, Immune Diseases, Lupus, Multiple Sclerosis, Alzheimer's, Chronic Fatigue, Fibromyalgia, Environmental Poisonings, Rheumatoid Arthritis, Migraines, and Parkinson's Disease, amongst others.

The energy producing chemical response of oxidation is vital in the body since the body uses various kinds of oxygen. To be able to prevent damage to surrounding normal tissue, treatments should be controlled carefully. Anti-oxidants that come in the kind of vitamins and enzymes will help to protect the body from whatever damage due to oxidation. Then again, the immune system utilizes oxidative energy as a weapon to be able to directly kill infectious agents like for example yeast, bacteria, viruses and parasites.
